PUBLIC COMMENT INVITED

Madoc Water Supply - Class Environmental Assessment

The Village of Madoc is experiencing water supply challenges with its existing municipal wells and requires an additional water source. A Schedule B Municipal Class Environmental Assessment (EA) study is underway to determine the preferred solution for ensuring a reliable municipal drinking water supply to meet existing demand and support future growth.

The following water supply and treatment options have been considered: do nothing, develop existing groundwater sources (Kiwanis Well or existing test wells), develop a new well, develop a surface water source (e.g. Moira Lake), upgrade existing treatment plants as required or build a new treatment plant at a new location. Detailed evaluation of alternatives, including extensive testing of a new drilled well, has resulted in a recommendation to use the newly developed Test Well #1 as the raw water source, and to upgrade the existing Whytock water treatment building to provide both redundant supply and treatment. The Hydrogeological Report for the project is now available for review.

The Class EA process includes consultation with the public and review agencies, an evaluation of viable alternative solutions, an assessment of the impacts of the alternative solutions, identification of measures to mitigate any adverse impacts, and the selection of a preferred solution.

Public input into the planning and design of this project is encouraged. If you have any comments or questions regarding this project, or to request further information, please send an email to one of the following project contacts:
